

Xtream Control

In a unique synthesis of hardware and software engineering, Xtream Media has revolutionized the integration of custom touch screen automation. The use of this touchscreen remote offers the ability to integrate systems without hours of programming. It should be clear that the power of this new product offers custom installers and end users long needed relief in a number of key areas.

The Xtream remote control is contained in a fully-enclosed aluminum/plastic enclosure. Its high-contrast display makes it particularly suitable for tasks that require fast and reliable reading of graphics or text. Examples include the display of process or machine data. The integrated display with 1024x768 pixels makes the powerful and highly-scalable is ideal for visualization tasks. Furthermore, the standard integrated touch panel ensures the simple operation, even in the most extreme conditions. The network card, the comprehensive on-board interfaces and connections for wireless LAN and identification systems installed as standard make the Xtream Control universally usable.
